SEC. 704. TREATMENT FOR EATING DISORDERS FOR MEMBERS OF THE ARMED FORCES AND DEPENDENTS OF MEMBERS OF THE UNIFORMED SERVICES.

(a) FINDINGS.—Congress finds the following:

(1) Eating disorders affect approximately 30,000,000 individuals in the United States, or nine percent of the population, during their lifetime, including individuals from every age, gender, body size, race, ethnicity, and socioeconomic status.

(2) Eating disorders are severe, biologically based mental illnesses caused by a complex interaction of genetic, biological, social, behavioral, and psychological factors.

(3) Eating disorders result in the second highest case fatality rate of any psychiatric illness, with one death every 52 minutes as a direct result of an eating disorder due to serious medical comorbidities and suicide.

(4) Untreated eating disorders cost the economy of the United States \$64,700,000,000 annually, with individuals and their families experiencing an economic loss of \$23,500,000,000 annually.

(5) A study from the Armed Forces Health Surveillance Branch found that diagnoses of eating disorders among military personnel increased by 26 percent from 2013 to 2016.

(6) Although accurate estimates are challenging due to underreporting, the prevalence of eating disorders among members of the Armed Forces is two to three times higher than in the civilian population.

(7) The Defense Health Board found that women members of the Armed Forces on active duty experience high rates of eating disorders, which can adversely affect the readiness and health of such members.

(8) Risk factors for eating disorders among members of the Armed Forces include pressure to maintain weight and fitness standards, trauma, sexual harassment, weight stigmatization, and post-traumatic stress disorder.

(9) Family members of members of the Armed Forces have a higher prevalence of eating disorders than the general population, with 21 percent of children and 26 percent of spouses of members of the Armed Forces found to be at risk of developing an eating disorder.

(10) Research demonstrates a strong correlation in the risk of developing an eating disorder between a military spouse and their adolescent child. An adolescent female dependent of a member of the Armed Forces is more likely to be at risk for an eating disorder if their nonmilitary parent is at risk for an eating disorder.

(b) TREATMENT FOR EATING DISORDERS FOR DEPENDENTS OF MEMBERS OF THE UNIFORMED SERVICES.—Section 1079 of title 10, United States Code, is amended—

(1) in subsection (a), by adding at the end the following new paragraph:
